

Muon Society

Commitment Form

IMSA's founder Dr. Leon Lederman received the Nobel Prize for Physics in 1988 "for the neutrino beam method and the demonstration of the doublet structure of the leptons through the discovery of the muon neutrino." The muon is one of the elementary particles making up matter. The Muon Society honors Dr. Lederman's ingenuity and curiosity. Planned gifts are critical to the long-term success of IMSA and ensure the ongoing success and innovation of the Illinois Mathematics and Science Academy.

By completing the form you indicate that you have included the IMSA Fund in your estate planning. You are not required to provide any other information.

Name _____

Relationship to IMSA
